The cDNA encoding Dermatophagoides pteronyssinus group I allergen Dep pi was obtd. in plasmid form as subclone from lambda gtll (Chua et al., J. Exp. Med. 167: 175-182 (1988)). The cDNA was used to express a Dep pI exp. Med. 167: 175-182 (1988). The cDNA was used to express a Dep pI exp. Med. 167: 175-182 (1988). The protein was used to design a series of covering a peptides synthesised by standard techniques to cover the whole Dermatophagoides pteronyssined Dep DI sequence. The T cell epitopes of the protein were mapped by detection of the peptide's ability to stimulate T cell activity. The peptides may be used for diagnosis and treatment of sensitivity to house dust mite allergens. When administered to house dust mite allergens the peptides are capable of modifying the allergic response to the allergens. The peptides may be confired for e.g. increasing solubility, enhancing therapeutic or preventive efficacy or stability. See also AAQ41212-6. (Updated on 25-WAR 2003 to correct PN field.)

This sequence encodes the group I protein allergen from the house dust mite D. pterchyssinus, Der p. I. The Der p I protein shows high homology to the group I protein allergen derived from D. farinae, Der f I, having an identity of 81%. Fragments of these proteins, and the corresponding croup II allergens. Der p II and Der f II. (see AAR51731-841) represent T call epitopes. Fusion peptides may be produced which comprise at least two or these anxigenic fragments. Each region of these petides may be derived from the same, or different, mite allergens. The anxigenic treatments may be produced by chemical synthesis, chemical cleavage of the protien allergen or by recombinant techniques. These peptides, when administered to a house dust mite sensitive individual, are capable of modifying the allergic response of the individual to the allergen. These peptides do not bind to immuno-globulin allergen. This reduces the major complications of standard immunocherapy, which are IgBs of a lesser extent than the full length protein allergen. This reduces the major complications of standard immunotherapy, which are IgBs—mediated responses such as anaphylaxis. Exposure of mite.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               allergic patients to these peptides may tolerise or anergise appropriate T cell subpopulations such that they become unresponsive to mite allergens and do not participate in mounting an immune response upon exposure. Administration of the peptide may also modify the lymphokine secretion profile as compared with exposure to the naturally occuring
                                                                                                                                                                                                                                                                                                                                                                                   Group I; protein allergen; house dust mite; D. pteronyssinus; Der p I; homoLogy; D. Earinae, Der f I; group II; Der p stropes; fusion poptides; antigenic fragments; substitution; deletion; addition; chemical synthesis; chemical cleavage; recombinant techniques; modify; allergic response; immunosjhobulin E; IgE; immunotherapy; IGE:mediated responses; anaphylaxis; toleries; anergies; T cell subpopulations; unresponsive; immune response;

The present invention describes peptides for treating sensitivity to house dust mite allergens from the genus Dernatophagoides. Peptides within the scope of the invention comprise at least one T cell epitope, or preferably at least two T cell epitopes of a protein allergen selected from the allergens Der p I, Der p II, Der f I, or Der f II. The invention properties as the corresponding, naturally occurring allergen, but having reduced side effects. The present sequence encodes Der p I from the present invention.                                                                                                                                                                                                                                                                                                                                                               Inducing immunological tolerance with cryptic peptide - esp from allergen or auto:antigen, esp admin orally.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunological tolerance to a protein antigen may be induced by admin. of a compsn. contgg. at least one cryptic peptide derived from that antigen. BIO mice were immnised with various Der p I peptides and then response to Der p I and the peptides was measured in the presence of spleen adherent cells. Peptides contg. amino acids 120-143 and 144-169 of Der p I were positive i.e., they contained cryptic epitopes. The cDNA fragment encoding amino acids 131-187 of Der p I was cloned into pGBX and expressed in bacteria as a fusion protein with glutathione-S-transferase. Mice were given orally 3 mg of this protein or a consecutive days, then 7 days later immunised subcuteneously with native Der p I in complete Freund's adjuvant. Seven days later Ivmph nodes, stimulated with protein or synthetic peptides, were assayed for Imphoxines (IL-2). Mice given the cryptic epitope had a much weaker response than those treated only with buffer. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CAATCATGCCGACCACCAAATGCACAACGTTTCGGTATCTCAAACTATTGCCAAATTTAC 360

```
This invention describes a novel method (I) for detecting whether an individual is sensitive to Dermatophagoides (house dust mites). The method involves detecting sensitivity to house dust mites in patients, comprising combining a blood sample from the individual with 1 or more isolated T cell epitopes of the protein allergens I and II ((DP I) and (DP II) from Dermatophagoides (house dust mites). 37 cell epitopes with varying, defined amino acids sequences (given in the specification) may be used in (I). The sample and allergens are combined under conditions appropriate for the binding of blood components with the polypeptides. The extent of binding is then indicative of the sensitivity of the patient to house dust mites (I) may be used to screen individuals for sensitivity to Dermatophagoides (house dust mites). The house dust mite is a major cause of a variety of allergic disorders such as asthma, rhintis and ectopic dermatitis. This sequence encodes the house dust
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           189
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

540
region comprising at least one T cell group of a protein allergen of the genus Dermatophagoides. The regions are derived from the same or different protein allergens of the genus Dermatophagoides. The peptides are useful for treating house dust mite allergy in humans. The peptides are also useful for detecting or diagnosing sensitivity to house dust mite protein allergens. The present peptides have similar or enhanced therapeutic properties as the naturally-occurring allergen, but have sequence encodes an allergenic protein from Dermatophagoides from which the T-cell epitope containing peptides are derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A Dermatophagoides cDNA library was constructed in E. coli Y1090 from mRNA isolated from live mites. The library was screened with two probes comprising the Der place Manuel Iragments 1-348 and 349-857. Clones expressing the mite allergen Der plawer isolated. The Der place mites allergen Der plawer eisolated. The Der place mites are as amplified from phage DNA by PCR. Each Der place isolated mp19 ms19 and sequenced the protein allergen encoded by the DNA is used as a diagnostic reagent in detecting and treating sensitivity to house dust mites and in desensitisation therapy. The present invention relates to a new DNA encoding a peptide from Dermatophagoides farinae protein allergen, designated Der f or Der f Dermatophagoides farinae protein allergen, designated Der f or Der f invention is useful for protein allergen. The invention is also useful for diagnosing, treating and preventing allergen to mite allergens, particularly the mites D. farinae. The invention is also useful as a probe for identifying additional nucleotide sequences coding for mite allergens baving amino acid sequences similar to Der f I or Der f II. The peptide is useful for detecting sensitivity in an individual to house dust mites and can be used to treat sensitivity (reduce sensitivity or desensities) in an individual modify the individual proprides when administered to sensitive peptide is administered. The peptides when administered to sensitive individual modify the individual, s allergic response to Der f I or in The peptides are also useful s apprified allergens useful in the standardisation of allergen extracts or preparations which can be used as teactivity to the mite species. The peptides are useful as diagnostic reagents for determining reactivity to the mite species. The peptides are also useful as diagnostic reagents for determining reactivity to the mite species. The peptides are also defining T cell epitopes and/or B cell epitopes which are of importance in allargic responses to D. farinae allergens and to determine the mediators or mechanisms of by which these reactions occur.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ACTAACGCCTGCAGTATCAATGGAAATGCTCCAGCTGAAATCGATTTGCGACAAATGGA 129
Dermatophagoides farinae protein allergen; Der f I; Der f II; allergy; allergic response; mite allergen; house dust mite; T cell epitope; B cell epitope; antiallergic, desensitisation therapy; modifies allergic response of house dust mite-sensitive individual; modify B-cell and/or T-cell response to Der f I and Der f II;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 ACTAACGCCTGCAGTATCAATGGAAATGCTCCAGCTGAAATGCGATTTGCGACAAATGCGA

                                        AAQS8665 is a cDNA clone encoding a preproenzyme Der pI. This is en in a single open reading frame, with a termination site at position 33. The mature protein can be used to detect sensitivity in an individual to house dust mite and to reduce the sensitivity of the individual. (Updated on 25-MAR-2003 to correct PN field.)

AAQS8669 is a cDNA clone encoding a full length preproenzyme Der pI. This is encoded in a single open reading frame, with a termination site at position 1011-1013. The mature protein can be used to detect sensitivity in an individual to house dust mite and to reduce the sensitivity of the individual. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ACTIGICACTOCCATTOGTATIGOAAGGAGGCTGTGGTTCATGTTGGGCTTTCTCTGGTGTT

                                                                                                              The present invention relates to a method for production of a recombinant protein allergen from an acarid of the genera Dermatophagoides or Euroglyphus. The allergens and also antibodies raised against them, are useful for dagnosis and treatment of allergies to house dust mites. When expressed in plants, allergens are synthesized and matured to biologically active form, with essentially the same pattern of glycosylation as the native protein. Recombinant expression provides a pure protein, contrast complex mixtures of allergens currently used. The present sequence represents the full length Der pl allergen encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 943 TACGGTTATTTTGCTGCCAACATCGATTTGATGATGATTGAAGAATATCCATATGTTGTC 1002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method for production of a recombination allergen from an acarid of the genera Dermatophagoides or Euroglyphus. The allergens and also antibodies raised against them, a useful for diagnosis and treatment of allergies to house dust mites. expressed in plants, allergens are synthesized and matured to biologically active form, with essentially the same pattern of glycosylation as the native protein. Recombinant expression provides pure protein, contrast complex mixtures of allergens currently used, present sequence represents full length ADNC encoding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 344 ACTAACGCCTGCAGTATCAATGGAAATGCTCCAGCTGAAATCGATTTGCGACAAATGCGA

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 10, Sequence 10, Sequence 10, Sequence 10, Sequence 10, Sequence 10,

cysteine proteinase (EC 3.4.22.-) precursor - black gram
NyAlternate names: cysteine endopeptidase; sulfhydryl endopeptidase
C;Species: Vigna mungo (black gram)
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
C;Accession: S12581; S05497; S20213; S46684
